Summary of CV

This section describes briefly a summary of your career in science, academic and research; the main scientific and technological achievements and goals in your line of research in the medium -and long- term. It also includes other important aspects or peculiarities.

I started my academic career in 2005. The principle aims that have guided me are the following: 1- to study innovative and understudied topics of sociology; 2- to publish in very high-quality journals; 3- to work with the most important international experts on my field in order to establish my own international network; 4- to navigate the obstacles in my academic career that have arisen due to the fact that I am a woman and a mother of six children.

My dissertation and post-doctoral research has focused on the trends and consequences of the increase of single parent families in Europe on children. Compared to the United States, far fewer studies on these issues have been conducted in Europe (especially in Spain) a constant aim of my investigation has been to close this gap in our literature. From 2006 to 2010, I completed my PhD at the Department of Political and Social Science at Pompeu Fabra University with European Mention. My supervisors were Pau Baizán, Joan Subirats and Jaap Dronkers. Jaap Dronkers was a leading expert in the field of divorce and the founder of the "European Group Network of Divorce". Two papers of my dissertation were co-authored with Michael Gähler (Stockholm University) and Marco Albertini (University of Bologna) and were published in high quality journals. During my PhD, I also created and coordinated a Research Group on the effects of parental divorce on children's well-being in Europe funded by EQUALSOC Network.

I spent two years (2009-2011) at the University of York as doctoral and postdoctoral researcher under the supervision of professor Kathleen Kiernan. During this period, I had my second child. From 2012 to 2013, I continued my research and taught courses at the University Abat Oliba CEU. During this period, I had my third child and also received two postdoctoral scholarships to carry out research at the very prestigious Center for Demography and Ecology at the University of Wisconsin-Madison. I had to renounce these scholarships- awarded by Generalitat of Catalonia and the Ministry of Education- due health problems related to the pregnancy of my third child and incompatibilities with the rules of the scholarships.

In September 2013, I started my participation in a RecerCaixa project and, afterwards. From January 2014 to July 2020, I had the Juan de la Cierva postdoctoral position at Pompeu Fabra University. From July 2020, I have the Juan de la Cierva Incorporación postdoctoral position at Center for Demographic Studies. During this period, I have participated in high quality international and national projects. I have started and consolidated new scientific international collaborations with leading researchers in my field from universities such as the University of Lausanne, the University of Virginia, Georgetown University and the University of Milano-Bicocca. During this period, I was also on leave due to births my fourth, fifth and sixth children. Overall, I'm the co-author of several papers published in the most important journals in the field of Demography and Family Studies. I have supervised two PhD dissertations. I have established my own international network and have a clear and independent research agenda.

General quality indicators of scientific research

This section describes briefly the main quality indicators of scientific production (periods of research activity, experience in supervising doctoral theses, total citations, articles in journals of the first quartile, H index...). It also includes other important aspects or peculiarities.

Current professional situation

Employing entity: Center for Demographic Studies-Spanish Ministry of Economy and Competitiveness
Type of entity: University Centres and Structures and Associated Bodies

Professional category: Juan de la Cierva Incorporation Research Fellow

Start date: 21/07/2021

Type of contract: Temporary employment contract

Dedication regime: Full time

Primary (UNESCO code): 120903 - Data analysis; 630903 - Family, kinship; 630907 - Social stratification; 631008 - Poverty

Performed tasks: I started the Juan de la Cierva Incorporation Contract in July 2021 under de supervision of Jeroen Spijker.

Previous positions and activities

	Employing entity	Professional category	Start date
1	Pompeu Fabra University-Spanish Ministry of Economy and Competitiveness	Juan de la Cierva Research Fellow	01/01/2014

- 1** **Employing entity:** Pompeu Fabra University-Spanish Ministry of Economy and Competitiveness
Department: Political and Social Science
Professional category: Juan de la Cierva Research Fellow
Start-End date: 01/01/2014 - 20/07/2021
Type of contract: Temporary employment contract
Dedication regime: Full time
Primary (UNESCO code): 630903 - Family, kinship; 630907 - Social stratification
Performed tasks: I started the Juan de la Cierva contract in January 2014 under the supervision of professor Gosta Esping Andersen. This scholarship was for 3 years but it has been extended due to the births of my fourth, fifth and sixth children. The research that I conducted comprises two research lines: 1) the trends and consequences of the socio-economic differences on family structure polarization and 2) the heterogeneity of the consequences of divorce. During this period, I published in high quality journals and I have supervised two Phd dissertations. In addition to that, during this period, I was involved in four national research projects and I was also involved with the project of the Department of Statistics of the University of Milan-Bicocca headed "Finite mixture and latent variable models for causal inference and analysis of socio-economic data" (FIRB - Futuro in ricerca). Thanks to this project, I completed a short visiting period in this Department, where I was trained in the application of several advanced statistical techniques.
- 2** **Employing entity:** University Pompeu Fabra **Type of entity:** University
Department: Political and Social Polity and Social Science
Professional category: Researcher at the Recercaixa Project "Spatial segregation of Poverty in Catalonia: Structure and Dynamics of Social Inequality".Project Leader: Sebastià Sarasa.
Start-End date: 01/09/2013 - 31/12/2013 **Duration:** 4 months
Type of contract: Temporary employment contract
Field of management activity: University
- 3** **Employing entity:** University Abat Oliba CEU **Type of entity:** University
Professional category: Assistant professor
Start-End date: 01/10/2011 - 01/06/2013
- 4** **Employing entity:** Scholarship Fundación Caja Madrid
Professional category: Visiting Postdoctoral and Doctoral Researcher at the Department of Social Policy and Social Science
Start-End date: 01/09/2009 - 01/09/2011 **Duration:** 2 years
Performed tasks: During the visitation period at the Department of Social Policy and Social Work of the University of York, I completed my PhD dissertation and I did a research about the consequences of parental divorce on children's well-being. The supervisor of this stay was Kathleen Kiernan. Together with other young invited researchers around the world, I participated in a very high-quality

summer seminar-SAGUARO seminar- which an ongoing initiative of Professor Robert D. Putnam at the John F. Kennedy School of Government at Harvard University.

- 5** **Employing entity:** University Pompeu Fabra **Type of entity:** University
Department: Political and Social Science
Professional category: FPU Doctoral Fellow
Start-End date: 01/02/2008 - 01/08/2009
Type of contract: Temporary employment contract
Performed tasks: During this period, I wrote two of the most important papers of my dissertation on the consequences of parental divorce on children's well-being. In addition, I created and coordinated a research network on "The effects of marital instability on children's well-being and intergenerational relations in Europe" funded by Equalsoc network. Several leading experts in the field of divorce took part of this group. Furthermore, I did several methodological courses.
- 6** **Employing entity:** Public Policies and Government Institute. Autonomous University of Barcelona. **Type of entity:** University
Professional category: FPU Doctoral Fellow
Start-End date: 01/01/2005 - 31/01/2008
Performed tasks: I started my PhD dissertation and I was involved in the Project "Urban Exclusion in Spain: Conceptual Foundations and Comparative Analysis (EXURB)" (project leader: Joan Subirats). I studied the urban exclusion in two neighbourhoods of Barcelona using qualitative techniques, together with other researchers of the project.
- 7** **Employing entity:** Department of Family and Social Solidarity, Lombardy Region.
City employing entity: Milan, Lombardia, Italy
Professional category: Internship
Start-End date: 01/09/2003 - 01/01/2004

Education

University education

1st and 2nd cycle studies and pre-Bologna degrees

- 1 University degree:** Master
Name of qualification: Métodos y Técnicas para el Estudio de la Población
City degree awarding entity: Bellaterra, Catalonia, Spain
Degree awarding entity: Demographic Studies Center
Date of qualification: 01/03/2006
Standardised degree: No
- 2 University degree:** Diplomatura / Llicenciatura / Grau
Name of qualification: Political Science.
Degree awarding entity: Autonomus University of Barcelona
Type of entity: University
Date of qualification: 07/07/2003
Average mark: Excellent
Prize: Special award for degree
Standardised degree: Yes
- 3 University degree:** Middle degree
Name of qualification: International Program in Political Science
Degree awarding entity: Institute of Political Studies, Paris (Sciences Po- Paris).
Date of qualification: 07/01/2001

Doctorates

Doctorate programme: Political and Social Sciences
Degree awarding entity: Pompeu Fabra University
Type of entity: University
City degree awarding entity: Barcelona, Catalonia, Spain
Date of degree: 11/11/2010
European doctorate: Yes
Date of certificate: 10/11/2010
Thesis title: Consequences of parental divorce and family structure on children's outcomes in European societies: individual, cohort and country explanations
Thesis co-director: Jaap Dronkers; Pau Baizán; Joan Subirats
Obtained qualification: Summa Cum Laude
Recognition of quality: Yes

Relevant results: Research shows that growing up in a single-parent family has a negative effect on children's educational level, whereas the relationship between family structure and test scores is less consistent or even nonexistent in some countries. Some authors suggested that something besides cognitive ability is responsible for the poorer school outcomes of children from nonintact families. In this study, we focus on a noncognitive outcome, in this case student tardiness, which is one of the components of problematic absenteeism. Using PISA 2003 data from Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Greece, Italy, New Zealand, Norway, Portugal, Spain, Sweden, the United Kingdom, and the United States, we find that children who grow up in a single-mother family have greater chances of arriving late for school in 16 of the 17 countries analyzed. Some studies have analyzed the extent to which the effect of growing up in a single-mother family is compensated by a high level of family resources. However, these yield mixed findings, which can be attributed to the differences between the countries studied. With the exception of Bernardi and Radl (2014), to our knowledge no study analyzes the heterogeneity of family structure effects using a cross-national approach. We find that in most of the 17 countries analyzed, a high level of family resources, such as home possessions, cultural resources, mother's occupational and educational level, and mother's type of work, do not compensate for the harmful effects of growing up in a single-mother family on children's school tardiness.

Relevant results: This study uses data from a nationally representative sample of UK children (the Millennium Cohort Study) to investigate the extent to which parents' relationship quality affects children's behavioural problems and whether the quality of the mother-child relationship and the family socio-demographic background moderate this association. We find that parents' relationship quality is clearly related to children's externalizing problems at ages 3 and 5 years and that the quality of mother-child relationships explains a substantial part of this association. Notably, a reported warm relationship with the mother does not reduce the detrimental effect of poor parental relationship problems, whereas a conflictual relationship exacerbates it. The effect of parent's relationship quality is the same for children from different ethnic and marital status backgrounds, as well as for mother's education and child's gender, but is greatest amongst poorer children. These findings suggest that policies and intervention programs that promote parents' relationship quality are likely to be beneficial for children from different family contexts, but especially for those from poor families.

Relevant results: Family structures changed enormously during the latter decades of the 20th century, with the diffusion of less-common family forms, especially among low-educated women. Previous research suggests that in Spain these changes have taken place in a very short period of time. The aim of this paper is, specifically, to analyse the educational gradient of single-mother families and its evolution in recent decades, focusing on age differences. We use the 1991, 2001, and 2011 Spanish population censuses and apply logistic regression analysis. Our investigation focuses on non-widowed mothers with children under 18. Results show how the educational gradient of single motherhood reversed between 1991 and 2011. Our analyses reveal differences by age. While mothers younger than 30 present a consistent and even increasingly negative educational gradient across the whole period, the reversal applies to older mothers. It is this reversal that has resulted in changing a positive to a negative or neutral educational gradient. Our results indicate that the diversification of educational profiles of Spanish mothers' family structures is a process that is here to stay. Contribution: The article contributes to

understanding the consequences of the diversification of family structures in the context of an economic crisis in which education is becoming increasingly important in determining mothers' and children's opportunities.

Relevant results: This study analyzes young adults' individuation with mother (IM) and father (IF) as a function of dysfunctional family patterns (DFPs)—caught between, parental pressure, unfair caregiving, and feeling deprived—as well as gender and parental divorce. It examines if parental divorce is associated with the presence of DFP in the young adults' family of origin and if the presence of DFP explains the association between parental divorce and lower levels of connectedness between offspring and fathers. A sample of 501 Spanish young adults (20–31 years old) answered the Spanish version of the YAGISS questionnaire (Pérez-Testor et al., 2008). Results showed that each DFP was associated with individuation in a different way. Parental divorce predicts the presence of all DFP and only parental pressure and feeling deprived explain the association between parental divorce and connectedness with father. Results varied as a function of the gender of parents and offspring. Implications for practice are discussed.

Relevant results: During the second half of the 20th century there was a positive relationship between single parenthood and the mother's educational level in Spain and Italy. However, several important transformations contemplated by Goode (1993) and McLanahan (2004) suggest that this relationship may have been inverted in Spain but perhaps not in Italy. The purpose of our study is to test this hypothesis. We use EU_SILC data from waves 2005 and 2011 and logistic regressions. We found the relationship between the mother's educational level and being a single mother is negative in Spain, while it is not significant in Italy. However, we found that for Italian mothers aged 40 and younger and mothers from northwest Italy, this relationship is also negative. By contrast, for

older mothers and mothers from the islands or southern Italy, this association is positive. Meanwhile, for mothers from the central and northeast regions, the relationship between educational level and single motherhood is not significant. These results show how Spain and some parts of Italian society are moving towards family models similar to those in the Northern European countries. As Sara McLanahan (2004) noted for the United States, this social transformation in Southern Europe cannot be considered without recognizing the potential negative consequence for future generations. The single-mother households dealing with the economic crisis that started in 2008 have lower socioeconomic backgrounds than the single mothers who suffered through previous crises, and therefore the consequences of this crisis for children in single-parent families might be even more negative, especially in Spain.

Relevant results: A large number of studies have shown that parental divorce is associated with psychological maladjustment in children. Less is known about whether the magnitude of this association has changed over time. This is mainly because of the lack of repeated data, containing identical measures over time. In the present article, the authors use data from two waves of the Swedish Level of Living Survey, conducted in 1968 and 2000, to analyze whether the association between parental divorce and psychological adjustment in 19- to 34-year-olds (i.e., born during 1934-1949 and 1966-1981) has changed between the two survey years. Results indicate a weakening association over time, but the change does not reach statistical significance. A reason for the persisting link seems to be that parental divorce is still associated with economic hardship and, above all, family dissension, two conditions that in turn are strongly associated with psychological problems in children.

Relevant results: Previous studies on divorce have found consistent empirical evidence that a negative association exists between marital disruption and children's wellbeing, life chances and intergenerational relations. However, there are relatively few studies on the long-term effect of divorce on parent-child contacts. Furthermore, contemporary research is confronted with two declining effect hypotheses. Firstly, it has been argued that the negative effects of divorce may possibly decrease as children's age at time of divorce increases; secondly, it has been suggested that the consequences of divorce might be less severe the more frequent marriage dissolution is in a society. By using data from Sweden, Denmark, Belgium and France from the Survey of Health, Ageing and Retirement in Europe, we analyze the existing relation between parents' divorce and the intensity of parent-child contacts. Furthermore, we provide some empirical evidence on the two declining effect hypotheses. Our findings show that divorce has long-term negative effects on the intensity of intergenerational relations. The results do not provide any evidence in favor of either the individual or the collective declining effect hypothesis.

Relevant results: We explore the effects of parental divorce and parental temporary separation on well-being of children at a specific stage of their development according to the parental relationship quality. Despite the importance of this subject, among previous studies only few consider very young children and are based on statistical methods properly tailored to enhance causal evaluations. We attempt to establish the effects on both cognitive abilities and psychological dimensions of children at age five by using data drawn from the first three waves of the UK Millennium Cohort Study. Using an appropriate imputation method, we apply the augmented inverse propensity treatment weighted estimator to infer causality. Overcoming some of the limitations of previous research, we find that the dissolution of high-quality parental unions has the most harmful effects on children, especially concerning conduct problems. We demonstrate the substantial variation on consequences of parental divorce depending on the level of parental relationship quality. We show that parental temporary separation is a type of family disruption that has significant negative effects on young children. In fact, we infer that they have more conduct and hyperactivity problems than children from stable or divorced families. Our results also suggest children to be targeted with appropriate policies aimed to reduce the adverse effect of family disruption.

- 9 Laura Bernardi; Anna Garriga. Custody arrangements and social inequalities among children. *Revue des politiques sociales et familiales*. 131 - 1, pp. 203 - 217. 2019.

Type of production: Scientific paper

Relevant results: The recent concentration of divorce and separation among the least advantaged, and the increase in shared physical custody of children raises the question of how such family developments affect social inequalities among children. Our paper contributes to this debate by examining the moderating role of parental socioeconomic background in the relationship between children's health and well-being and child custody arrangements. From the Spanish 'Health Behaviour in School-aged Children' survey, we test the competing

compensatory and floor effect hypotheses, distinguishing the separate effects of father's and mother's education and occupation on multiple children outcomes, such as psychological complaints and life satisfaction. Our results indicate that growing up in a "non-intact" family still has greater negative consequences for disadvantaged children, and that social inequalities in child health and well-being after separation persist in contemporary Spain.

Relevant results: Although there is consistent evidence of the negative effects of parental divorce on children's educational level, the mechanisms and the protective factors that explain the consequences of divorce on children have not been clearly determined. This information is required in order to create effective policies and programs to help children through the divorce process. This study uses the longitudinal data from the British Birth Cohort Study 1970 and structural equation models to test whether family income, maternal supervision, and children's psychological problems mediate the effect of parental divorce on children's educational level and to what extent these variables are important protective factors for children through the divorce process. The main aim of this study, however, is to test the importance of children's psychological well-being on the relationship between parental divorce and children's educational level. Only two studies noted the importance of children's psychological well-being theoretically, but were unable to measure it. This study demonstrates empirically that children's psychological well-being is not a negligible mechanism and that this variable represents a very important protective factor for children of divorce, since the effect of psychological problems on educational level is significantly greater for children from divorced families than for those from intact ones. Although most family policies aimed at divorced families are targeted to improving family income, these findings reveal the need for governments to ensure that all children of divorce have access to programs and interventions designed to improve their psychological well-being.

Relevant results: Today, Spain has one of the highest levels of shared physical custody in Europe. Living in shared physical custody is more common for boys than for girls who are more likely to live in single mother families. This study investigated the association between living in shared physical custody or in single-mother families and adolescents' health risk behaviours. Differences by gender are also assessed. Data on 15-year-old adolescents from the 2014 Spanish Health Behaviour in School-aged Children (HBSC) survey were analysed using logistic regression. Adolescents from single-parent families and in shared physical custody have a higher prevalence of risk behaviours than those in two parent families. However, the results for those in shared physical

custody were less pronounced than for those in single mother families. Regarding substance abuse, girls seem to be more negatively affected by parental break-up than boys. Adolescents living in shared physical custody are not at a higher risk of having been drunk than those in two parent families while adolescents living in single mother families are at a higher risk of having been drunk than those in two-parent families. Regarding substance abuse, girls seem to be more negatively affected by parental break-up than boys but, when separation does occur, living in shared physical custody seems to be protective on the risk of having been drunk for girls. Shared physical custody after parental break-up appears to constitute a health protective factor for adolescents. Our study should be followed by more research on gender differences.

Relevant results: We sought to determine to whether the increase of single mother families is likely to result in increasing children's inequality in 21 Western countries. This is important because most previous evidence on "diverging destinies" has come from the United States. First, we analyzed the extent to which single motherhood is concentrated among women with low levels of education across countries. We then investigated how the effect of being in a single mother family differs by mother's education, testing both the "compensatory hypothesis" which posits that better educated mothers are better equipped to protect their children from the negative consequences of growing up in a single-parent family, and the "floor effect hypothesis" which maintains that children with less educated mothers are less vulnerable to single motherhood given that their mothers are already in a bad situation than cannot become much worse. We used multiple children's outcomes and countries in order to overcome the limitations of previous research on how mother's education conditions the effects of being in a single mother family. Overall, we found that the distribution of and consequences associated with single motherhood were such that it could be expected to increase inequality in 11 of the 21 countries.

Shared Physical Custody: Interdisciplinary Theoretical and Empirical Insights in Custody Arrangements, Laura Bernardi & Dimitri Mortelmans. Springer, 2020.

Type of production: Book chapter

Relevant results: This study contributes to the emerging literature on the diffusion of SPC across social strata, by considering children from married and cohabiting unions and by comparing two contexts, Sweden and Spain, with different prevalences of SPC and with diverging social and gender policies. The results suggest that despite the fact that SPC correlates with positive outcomes for children, this effect is unevenly distributed across social strata both in Spain and Sweden. As already demonstrated in the literature, SPC arrangements are more frequent among parents with higher socioeconomic status and sole-custody arrangements among other parents. More original are the results related to the testing of the two competing hypotheses about the evolution of inequality in post-separation childcare arrangements; the diffusion hypothesis and the diverging destinies hypothesis. Our study clearly shows that the evolution of inequality in post-separation arrangements differ in the two countries. In Spain, we found evidence in favour of the diffusion hypothesis, with increases in the prevalence of SPC going hand in hand with the diffusion of SPC across social strata. By contrast, the Swedish data support the diverging destinies hypothesis, with increases in SPC producing no variation in its social stratification over time. This latter result was surprising as we had expected that SPC would be more widespread across social strata in Sweden than in Spain, given the greater degree of promotion of gender-equal parenting in Sweden and given the greater generosity of the Swedish welfare state towards broken- up families. However welfare state and gender regimes do not seem to make a difference in the association of family affluence and SPC

Relevant results: This chapter has a two-fold objective: (1) to explore the factors that are contributing to the growth of shared residence in Spain and (2) to examine the variations of child life satisfaction levels in different kinds of family arrangements with a particular focus on shared residence. In order to do so our analyses are drawing on two different databases, i.e. the Spanish Statistics of Divorces (2007-2015) and the Health Behaviour in School-aged Children survey for Spain 2014. The investigation of judicial data suggests that the progress of shared residence in Spain is driven by the development of egalitarianism in divorce proceedings such as rates of mutual agreement, joint filing and payment of child maintenance by both parents resulting from the growth of gender equality. On the other hand, findings from survey analysis show that parents opting for shared residence arrangements tend to feature marked sociodemographic characteristics in terms of high educational attainment, employment rates and perceived wealth. Finally, it appears that children from shared residence arrangements display better outcomes in terms of life satisfaction than those from single parent families, but they are still very distant from intact ones.
